

S1R1U\$ M0rning R3p0rt

Thursday 03 September 2026 | 18:59 EST

Honest ops. Never auto-green. SuperGrok only paid service.

1. OPEN -- do not green

Yahoo Finance 401 -- quote backup is dead. Mag7 / MSTR / rotation go dark if the primary quote path dies. Second quote host is not wired. LEAVE RED.

mempool.space + Blockstream timeouts -- recommended fees were n/a on the last fill. The fee-spike gate PASSES when feeFast is null (fee-blind). That is a hole, not a story. LEAVE RED until a live sat/vB prints.

Live fee check this run: MISSING (fee n/a). Coinbase last: LIVE \$77,074.96.

2. Known / verified (green only with live tape)

Binance 451 -- geo-block. Not on the mandate path. OKX/HL still print LS. LS row OK.

Bybit 403 -- known geo-block. Covered by OKX / Hyperliquid / Bitfinex.

CoinGecko 429 -- Binance-futures fallback only. Not core LS.

3. Last 24h unique host errors

- api.bybit.com 403 api.bybit.com
- query1.finance.yahoo.com 401 query1.finance.yahoo.com
- fapi.binance.com 451 fapi.binance.com
- mempool.space slot timeout mempool.space
- blockstream.info slot timeout blockstream.info
- api.coingecko.com 429 api.coingecko.com

4. Architecture

Two-phase 5-minute pull (core then fill). Semaphore 12. Slot timeout no longer marks Coinbase dead. Bots 1-6 vote; bot 7 issues BUY / ACCUMULATE / HOLD / WAIT. Never TRIM the stack. Never sell bitcoin. Never short. Practice ticks on that cadence with no admin click. Live Coinbase create is locked on this host. G0DZ1LLa M0D3 is an isolated sleeve (practice for all, Live admin HMAC). Fill cards list the MANUAL/AUTO settings that fired each buy or sell. TRIM on the sleeve sends BTC to 33km... Fund USDC 0x5511... Receive only.

5. Security audit

Argon2id admin lock. Session token in sessionStorage. YubiKey required for outgoing CLI copy. No seeds or CDP secrets on this host. Reset mailbox is server-only. Idle Matrix lock (classic green unless admin is on GM or AUTO Live). Vault holds addresses/UUIDs, not keys. GM Live flag is not persisted in localStorage (v2). Slot-timeout no longer poisons the dead-host map. Snapshot passphrases are not packed inside the archive.

5b. GM sleeve

Practice open. Live requires admin token. AUTO never naked-shorts. Day-trader 1-24h. Triggers printed on fills.

Profit BTC 33kmWvmf3nz3255dGmbHxigb9X6Szv6cJ8 (keep bitcoin). Fund USDC
0x551163f5d4c0361155d16131459afa5c936a60ad.

6. Live feed audit (this run)

OK coinbase last 77074.96
OK okx LS 1.31 | 6 venues
OK asia kimchi 0.9738618675944943
OK em 3 in / 0 out
OK fear-greed 65
OK sec 12 filings (empty can be a quiet window)
OK rss 15 headlines
OK capital ETF flow -236463473.45
OK pools 11 pools | hunt 2026-09-02
OK mining EH 825.515287935 | fee n/a | BTC.D 64.6505302803437 | regions 4
OK macro T-bill 3.78 2y 4.39 10y 4.79 30y 5.27 M2 23218 llama 3
OK strategy 9 products
OK holders 20 holders
OK gold-btc 18.2 oz

7. Weaknesses / optimize

Fee-blind gate (null feeFast counts as pass).
Yahoo quote backup 401 -- no second host.
Live accumulation cannot run without a CDP key on a locked operator machine.
Serverless rate-limit counters are per instance.
s1r1us.ai custom domain still operator-attach (DEPLOYMENT_NOT_FOUND until Publish + domain).

8. Mandate scores (1-10)

1 Accumulate BTC	8 7-bot + GM aggressive sleeve
2 Never sell / never short	8 stack yes; GM TRIM keeps BTC; naked Live-admin only
3 Minimize loss	7 stops block add-on buys; do not dump BTC
4 Honest ops / security	8 Yahoo + fees stay OPEN; slot-dead FIXED

OVERALL 8

9. Operator action before green

A. Wire a second quote host (or repair Yahoo crumb) -- then re-check Mag7/MSTR.
B. Land a live sat/vB (mempool.emzy.de fees or equivalent) -- then re-check the fee gate.
Nothing else is blocking green. I will not green A or B until they actually work.
